

INTRODUCTION TO FRONT END WEB DEVELOPMENT **ONLINE COURSE**

Dear Students!

Thank you for coming on board. Together we will dive into the world of web development and learn valuable skills that would enable you to improve your career prospects in the world of tech. And use the newly learnt skills in any way you want: personal blogs, business, fun events – there are no limits.

HOW TO GET THE MOST FROM THE ONLINE COURSE

- Follow your instructor's explanation step by step. And revise as much as possible afterwards.
- All group exercises will be done together with the instructor. Use group chat to ask questions.
- When possible, online sessions will be recorded, so you would be able to review and follow instructions even after the session has finished.
- **NOTE: Your slides are different to instructor's slides! You have fewer slides in your deck, BUT they are more text heavy, so you are able to revise covered materials in more depth.**

Session flow:

- Session 1 - HTML basics
- Session 2 - CSS basics
- Session 3 - Recap & Project Design
- Session 4 - JavaScript Part 1 (Overview, data types)
- Session 5 - JavaScript Part 2 (Loops, functions and scope)
- Session 6 - JavaScript Part 3 (Objects and the DOM)
- Session 7 - Github, Frameworks & Project work
- Session 8 - Project presentations & Careers in Web Dev

Good luck on the course and feel free to reach out to your course Manager for any questions or updates!
